

Help Us Prevent the Spread of Illness

In order to best meet your child's needs and the needs of all the clients we serve, we ask that you keep your child at home when he/she is ill.

Bringing your child in when ill impacts your child's progress and the progress of others in the following ways:

- The child does not perform well in therapy.
- The child uses energy that the body needs to fight off the illness.
- An ill child exposes other clients to the illness, endangering those children who have fragile medical conditions.
- An ill child exposes therapists to the illness, resulting in the spread of the illness and cancelled visits when the therapist needs to stay home due to an illness.

Please have your child stay home and recover from an illness if the following conditions are present:

- Fever of 101 degrees or higher.
- Vomiting (unless due to a non-communicable condition).
 - Please return when vomiting has subsided and diet is tolerated for eight hours.
- Diarrhea (unless due to a non-communicable condition)
 - Please return when stools return to normal consistency for 24 hours.
- Excessive coughing, sneezing, drainage from the nose.
- Child is excessively weak and tired (unless due to a non-communicable condition).

Thank you for helping us to prevent the spread of illness at our clinic.
